

INSTALLATION

Installation CodeIgniter project is as simple as copy and paste.

Configuration:

PHP 5.6
MySQL 5.7.19
SimpleXML enabled

Installation:

1. Copy all files and directories to the server.

2. If it is localhost everything should be ok, but if not then it could be necessary:

Open application/config/config.php and uncomment lines:

```
26    //$domain = $_SERVER['HTTP_HOST'];  
27    //$config['base_url'] = 'http://'.$domain;
```

and comment:

```
28    $config['base_url'] = '';
```

3. Database configuration.

Application/config/database.php

```
76    'hostname' => 'localhost',  
77    'username' => 'username',  
78    'password' => 'Password',  
79    'database' => 'DB_name',
```

4. That's it!

If anything went wrong then You can enable error reporting:

index.php

Replace it:

```
56    define('ENVIRONMENT', isset($_SERVER['CI_ENV']) ? $_SERVER['CI_ENV'] :  
        'production');
```

with that:

```
56    define('ENVIRONMENT', isset($_SERVER['CI_ENV']) ? $_SERVER['CI_ENV'] :  
        'development');
```
